Abstract

There is disclosed a method and a device for generating distributed applications for each
level in a multi-level database environment, comprising:

- receiving an integrated configuration code comprising code sections for all
  information required for generating an application in each of said levels,

- parsing all code sections in said integrated configuration code required for at least
  one level of said multi-level environment,

- extracting said parsed code sections for said at least one level, and

- converting said extracted code sections into level-specific application code for
  each extracted level.
